A Even action $\epsilon \in A_4 = \Gamma_{\text{tet}}$

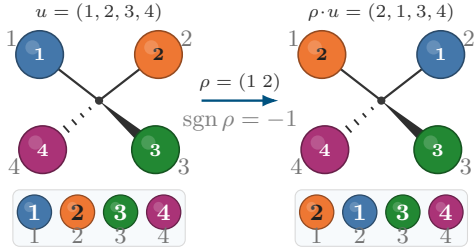

$\epsilon \in \Gamma_{\text{tet}}$; 12 of the 24 alignments

SAME ORBIT $[\epsilon \cdot u]_{A_4} = [u]_{A_4}$

B Odd action $\rho \notin A_4$

$\rho \in S_4 \setminus \Gamma_{\text{tet}}$; 12 of the 24

OPPOSITE $[\rho \cdot u]_{A_4} = \operatorname{opp}[u]_{A_4}$

$[u]_{A_4}$: 12 even frames

$S_4 = A_4 \sqcup \rho A_4$, hence $24 = 12 + 12$:
$[S_4 : A_4] = 2$ configurations, exchanged by every odd alignment

$[\rho \cdot u]_{A_4}$: 12 odd frames
